

PF-10

GROUT LINES PROTECTION

IDEAL FOR CEMENT
GROUT LINES.
INTERNAL AND EXTERNAL
APPLICATION.

The best eco-friendly
protection

PF-10

ECTOR® PF10 is a nanotechnology treatment of last generation designed to properly protect all cement grout lines.

ECTOR® PF10 provides an excellent protection against dirt, oily substances and water infiltration, assuring an extreme ease of cleaning. Unlike protective silicones on the market which turn yellow and “peel off” over time, ECTOR® PF10 aggregates to the substrate of the grout lines at the molecular level, providing an invisible, total and long lasting protection.

PULITORE FUGHE is a strong and penetrating cleaner designed for ceramic and porcelain floor.

No matter how dirt the grout lines are, this cleaner will be up to the task.

ATTENTION: DO NOT USE on marble and natural limestone floors.

features

- ECTOR® PF-10 dries quickly at room temperature
- It is frost resistant
- It is solvent and silicones free
- Water based

advantages

- The treated surfaces get excellent hydrophobic and oleophobic properties which literally reject dirt and contaminants
- Dirt cannot penetrate into the substrate so the surface becomes easy to clean.
- It creates an excellent antifouling protection (against moss and fungi).
- It does not create a film which becomes yellow or “peel off” over time, but provides an invisible protection.
- It does not alter the breathability of the grout lines.
- It provides a long lasting protection.
- Very easy application.

method of application

PF-10

1. Clean carefully the grout lines by using "Pulitore Fughe" (undiluted) and an appropriate brush (if not available, a nail brush may be useful at this purpose). If necessary, repeat the procedure to assure a perfect cleaning.
2. Rinse to remove any residue and let the surface dry thoroughly.
3. Now the grout lines are clean and ready to be protected.
4. Ector® PF-10 is ready to use. Apply it directly on the grout lines without overusing.

During the application, we recommend to immediately wipe off (with a paper towel) any excess of product that may have reached the tiles.

Once dry the grout lines are already protected, but the optimal and complete protective effect is achieved 24 hours after the treatment.

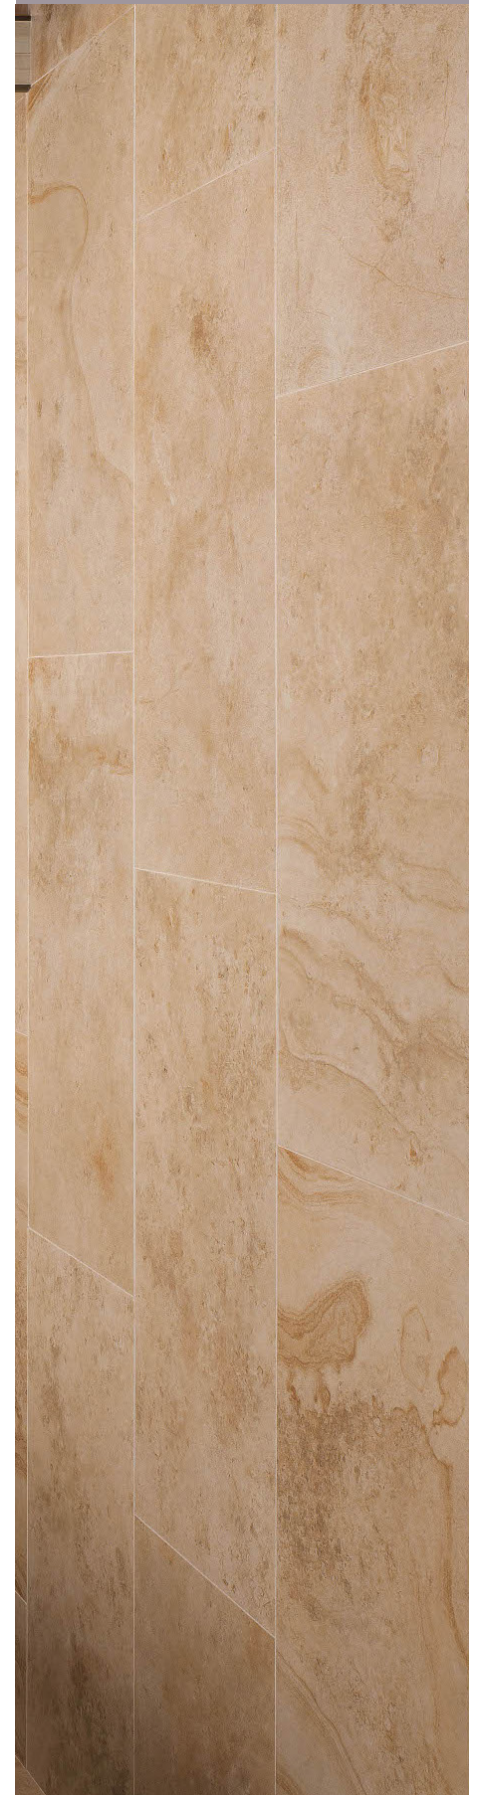

CONSUMPTION

The consumption depends on the width of the grout lines. Usually the kit (100 ml) is enough to treat grout lines for 200 linear meters.

Packaging:

kit composed by:

- 100 ml/1000 ml bottle of PULITORE FUGHE (cleaner)
- 100 ml/1000 ml bottle of PF-10 PROTETTIVO FUGHE (protective treatment).
